EdX Updates for the Week Ending 13 January 2017 ^[1]

EdX follows a continuous release model. Updates are released to the platform on edx.org ^[2] and [edX Edge](https://edge.edx.org) ^[3] each day.

The following changes were released during the week ending 13 January 2017.

- The problem template for Custom JavaScript Display and Grading problems (also called custom JavaScript problems or JS input problems) has been updated.
- On unit pages in Studio, the guidance in the **Unit Location** panel now instructs course teams to use `/jump_to_id/<location ID>` formatting to create links to units in HTML text components. For more information, see [Add a Link to a Course Unit](#) ^[4] in *Building and Running an edX Course* or [Add a Link to a Course Unit](#) ^[5] in *Building and Running an Open edX Course*.
- When learners select the **Support** option in the LMS to contact learner support, learners can specify the course that is the subject of their question or comment.
- The documentation for Custom JavaScript Display and Grading problems has been extensively updated. For more information, see [Custom JavaScript Display and Grading Problem](#) ^[6] in *Building and Running an edX Course* or [Custom JavaScript Display and Grading Problem](#) ^[7] in *Building and Running an Open edX Course*.

For more information about these and other changes during the week ending 13 January 2017, see the [edX Release Notes](#) ^[8]. You can access the weekly release notes, as well as all of the edX documentation, at docs.edx.org ^[9].
